. Portable Macromedia FreeHand MX V110292rar Banners download pcQ: What is the best method for creating a validation rule on a custom object with a lookup field to Opportunity? What is the best method to create a validation rule on a custom object with a lookup field to Opportunity? Specifically - the end goal here is to ensure that when users are adding a new Opportunity record, if a Contact record with the same Primary Opportunity is already in use, it is required to delete the record (otherwise the system will not allow the opportunity to be created and a message is sent out). I have tested a rule on the 'UniqueContactId' field and it works, but I am unsure if this is the best method as it seems to fire both if the Opportunity is successfully created or fails due to an Error on the Opportunity line (opportunity.SubjectTypeError: Can't create an Opportunity without a Name). Here is the validation rule I have created: A: For the Opportunity.Validation rule - use the Validation Method set to None It will only fire if the Opportunity is saved. For the UniqueContactId field - set it to YesNo_x. If the record is successfully validated, the validation message will be stored in the Error Log. If the validation fails, no message is saved, and the record is not committed. It will not fire for a System error on the Opportunity line and is the best method to use. // // AutoCompleteTokenizer.swift // RxSwift // // Created by Krunoslav Zaher on 6/7/15. // Copyright © 2015 Krunoslav Zaher.
